Anwendungsbeschreibung

Human Ghrelin (GHRL) ELISA Kit employs a two-site sandwich ELISA to quantitate Ghrelin in samples. An antibody specific for Ghrelin has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any Ghrelin present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human Ghrelin detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of Ghrelin bound in the initial step. The color development is stopped and the intensity of the color is measured.
