Anwendungsbeschreibung

Human High mobility group box 1 protein (HMGB1) ELISA Kit employs a two-site sandwich ELISA to quantitate HMGB1 in samples. An antibody specific for HMGB1 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any HMGB1 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human HMGB1 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of HMGB1 bound in the initial step. The color development is stopped and the intensity of the color is measured.
