Anwendungsbeschreibung

Human Ten-eleven translocation methylcytosine dioxygenase 1 (TET1) ELISA Kit employs a two-site sandwich ELISA to quantitate TET1 in samples. An antibody specific for TET1 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TET1 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human TET1 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of TET1 bound in the initial step. The color development is stopped and the intensity of the color is measured.
