Anwendungsbeschreibung	Mouse Tartrate-resistant acid phosphatase 5b (TRACP-5b) ELISA Kit employs a two-site sandwich ELISA to quantitate TRACP-5b in samples. An antibody specific for TRACP-5b has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TRACP-5b present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Mouse TRACP-5b detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of TRACP-5b bound in the initial step. The color development is stopped and the intensity of the color is measured.
