Anwendungsbeschreibung

This Mouse Microtubule-associated protein 1S (MAP1S) ELISA Kit employs a two-site sandwich ELISA to quantitate MAP1S in samples. An antibody specific for MAP1S has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MAP1S present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MAP1S is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MAP1S bound in the initial step. The color development is stopped and the intensity of the color is measured.
