Anwendungsbeschreibung	PurKine(TM) MBP-Tag Protein Purification Kit (Dextrin) effectively purifies high levels of overexpressed MBP-tagged fusion proteins in gravity column procedures at a variety of scales. The Resin consists of 90µm beads of cross-linked 6% agarose, to which Dextrin has been coupled. Tests confirm that performance equals or exceeds popular Dextrin resins from other suppliers, and no decrease in performance occurs after at least five repeated uses. In addition, its high flow properties make it excellent for scaling-up.
