| Produktbeschreibung      | IgG4 is the least abundant immunoglobulin present in the human serum. IgG4 is implicated in a unique process called fab-arm exchange (FAE) and limits the formation of immune complex. It has anti-inflammatory properties. IgG4 functions as a therapeuti... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
| Klon-Bezeichnung         | [QA16A15]                                                                                                                                                                                                                                                     |
| Reinheit                 | Low Endotoxin, Azide-Free antibody was purified by affinity chromatography.                                                                                                                                                                                   |
| Formulierung             | Low Endotoxin                                                                                                                                                                                                                                                 |

Application Verdünnung

QA16A15 is a recombinant human IgG4. It can be used as an isotype control when evaluating fully human, humanized, or chimeric antibodies. This product is suitable as an isotype-matched control for ELISA, immunoblotting, FACS, IHC, and functional studies.
