Product Datasheet

24(S)-Hydroxycholesterol, CAS [[474-73-7]] FBM-10-1331

Artikelname	24(S)-Hydroxycholesterol, CAS [[474-73-7]]
Artikelnummer	FBM-10-1331
Hersteller Artikelnummer	10-1331
Alternativnummer	FBM-10-1331-1MG,FBM-10-1331-5MG
Hersteller	Focus Biomolecules
Kategorie	Biochemikalien
Produktbeschreibung	Endogenous cholesterol metabolite...
Molekulargewicht	402.66
Reinheit	99% by HPLC, NMR (Conforms)
Formulierung	White solid
CAS Nummer	[474-73-7]
Formel	C27H46O2

Anwendungsbeschreibung	24(S)-Hydroxycholesterol is an important cholesterol metabolite (cholesterol 24-hydroxylase) found in the brain.¹ It is an endogenous agonist of the nuclear receptor LXR.² It has been shown to induce cell death in neuroblastoma cells³, possibly via a necroptosis pathway⁴. 24(S)-Hydroxycholesterol has also been found to be a high affinity ligand for RORalpha and RORgamma ($K_i = 25 \text{ nM}$).⁵ 24(S)-Hydroxycholesterol levels are elevated in the cerebral spinal fluids of patients with neurogenerative diseases suggesting possible clinical applications.^{6,7} It was also able to reduce Abeta production and increase ER-resident immature amyloid precursor protein (APP) levels in human neuroblastoma SH-Sy5Y cells and CHO cells via inhibition of intracellular amyloid precursor protein trafficking.⁷
