Anwendungsbeschreibung	BIX-01294 is a selective inhibitor of G9a histone methyltransferase (G9aHMTase, IC50 = 1.7 $\mu$ M) as well as GLP HMTase (IC50 = 38 $\mu$ M) leading to a decrease in H3K9me2(histone H3 lysine 9 methylation) in vitro. <sup>1</sup> BIX-01294 facilitates the reactivation of pluripotency genes and induces passive demethylation, thus promoting reprogramming. BIX-01294, in combination with BAY K8644 (a calcium channel agonist), was found to improve reprogramming efficiencies of Oct4-Klf4-(OK)-infected neural progenitor cells. <sup>3</sup>
