Anwendungsbeschreibung	<p>The first small-molecule inhibitor of the PDZ domain in protein interacting with C kinase 1 (PICK1). Binds to PICK1 PDZ domain with affinity similar to that of the endogenous peptide ligands (<math>K_i \sim 10.1 \mu\text{M}</math>). Does not bind to PDZ domains of postsynaptic density protein 95 (PSD-95) nor glutamate receptor interacting protein 1 (GRIP1). Pretreatment of cultured hippocampal neurons inhibits coimmunoprecipitation of the AMPA receptor GluR2 subunit with PICK1. FSC231 accelerated recycling of fluorophore-tagged GluR2 in hippocampal neurons after internalization in response to NMDA receptor activation. Blocks the expression of both long-term depression and long-term potentiation.<sup>1,2</sup> Attenuates cocaine seeking in a rodent model.<sup>3</sup> Blocks PICK1-induced anti-inflammatory effect in acute liver injury.<sup>4</sup></p>
