Anwendungsbeschreibung	PY-60 (2765218-56-0) activates YAP transcriptional activity (EC50 = 1.6 μM) via delocalization of annexin A2 (ANXA2) from cell membranes leading to Hippo inactivation, a key controller of YAP.1 It was able to induce serum-free expansion of MCF10A cells and epidermal keratinocytes and their precursors ex vivo and in adult mice. PY-60 promoted regenerative repair of cutaneous wounds in pig and human models by enabling a pro-proliferative transcriptional program in keratinocytes and dermal cells that accelerated re-epithelization and regranulation of the wound bed.2
