Anwendungsbeschreibung	<p>SP100030 is a potent dual inhibitor of NF-<math>\kappa</math>B- and AP-1-mediated gene expression (IC50s = 50 nM for both in transfected Jurkat T-cells).<sup>1</sup> It was able to specifically block IL-2 and IL-8 in Jurkat T-cells (IC50s = 30 nM for both).<sup>1</sup> SP100030 treatment significantly decreased arthritis severity in DBA/1J mice.<sup>2</sup> It selectively inhibited CD8(+) T-cells and mRNA expression of TH1 and Th2 cytokines in a rat model of asthma but did not inhibit allergen-induced eosinophilia and bronchial hyperresponsiveness.<sup>3</sup> SP100030 ameliorated muscle wasting in a cancer cachexia rat model.<sup>4</sup> SP100030 suppression of T cell activation has been attributed to targeting of XPO1 (with minimal impact on nuclear export and cell viability).<sup>5</sup></p>
