Anwendungsbeschreibung	<p>PRIMA-1MET reactivates mutant p53, an important tumor suppressor gene, in cancer cells.<sup>1</sup> It induces p53-dependent mitochondrial apoptosis via activation of caspase-2.<sup>2</sup> PRIMA-1MET showed significant antitumor activity in multiple myeloma via activation of p73 and had previously been shown to target p53 family members p63 and p734. Tumor cell death by PRIMA-1MET has been also shown to be caused by glutathione depletion and induced ROS production in a p53 independent manner.<sup>5-7</sup> PRIMA-1MET probably induces tumor cell death by both reactivating mutant p53 and inhibiting cellular thiol-dependent redox systems.<sup>8</sup></p>
