Anwendungsbeschreibung	<p>LGK974 is a potent and selective inhibitor of Porcupine (IC₅₀ = 1 nM). Inhibits Wnt signaling (IC₅₀ = 0.4 nM) in vitro and in vivo.¹ It displays efficacy in several cancer models including glioblastoma^{2,6}, squamous cell³, renal cell carcinoma⁴, and non-small cell lung⁵. LGK974 reprogrammed the immune suppressive tumor microenvironment in a mouse model of glioblastoma to increase antitumor immune responses.⁶ It also potentiated anti-PD1 therapy by increasing DC3-like dendritic cells and decreasing myeloid suppressor cells. LGK974 attenuated myocardial ischemia-reperfusion injury by reducing inflammatory responses.⁷</p>
