Anwendungsbeschreibung	<p>Potent (IC₅₀ = 27 nM) inhibitor of the TAM family kinase AXL.¹ It displayed potent activity against the pancreatic tumor cell line PSN-1 (IC₅₀ = 6 nM). Dubernatinib also strongly inhibited the kinases Aurora A/B, JAK2, ABL1, and CHEK1. It induced apoptosis in chronic lymphocytic leukemia (CLL) cells and acted synergistically with BTK inhibitors against CLL cells.² It inhibited neuroblastoma cell growth and enhanced sensitivity to conventional chemotherapy.³ Dubernatinib was also active in a drug-resistant acute myeloid leukemia model⁴ and reduced metastasis and therapy resistance in pancreatic cancer models⁵.</p>
