Anwendungsbeschreibung	<p>Potent inhibitor of casein kinase 1epsilon/delta (CK1epsilon, IC50 = 7.7 nM, CK1delta, IC50 = 14 nM).¹ It is a circadian clock modifier that caused robust phase delays in rats¹ and Cynomolgus monkeys². PF-670462 caused nuclear retention of the clock protein PER resulting in period lengthening in a phase-specific manner that was dependent on CK1delta inhibition and not CK1epsilon.³ It improved cognitive performance and reduced amyloid load in various mouse models of Alzheimers disease.⁴⁻⁶ PF-670462 slowed the progression of and increased survival of chronic lymphocytic leukemia in mice alone and in combination with Ibrutinib.⁷</p>
