Anwendungsbeschreibung	<p>Etomoxir (828934-41-4) is an irreversible inhibitor of mitochondrial carnitine palmitoyl transferase 1 (CPT1).¹ It is widely used to study fatty acid oxidation. Etomoxir has been investigated as a therapeutic agent for heart disease², diabetes³, and cancer^{4,5}. Use of etomoxir in concentrations greater than 5 μM induces acute production of ROS with associated evidence of severe oxidative stress in proliferating T cells indicating a loss of specificity for CTP1 at these concentrations.⁶ 200 μM etomoxir inhibited complex I of the electron transport chain.⁷</p>
