Anwendungsbeschreibung	Ibrutinib (936563-96-1) is a very potent (IC <sub>50</sub> = 0.5nM) irreversible inhibitor of Bruton tyrosine kinase (BTK) that blocks activation of the B-cell antigen receptor (BCR). <sup>1</sup> Ibrutinib also potently inhibits several other kinases including BLK, BMS, FGR, EGFR, and ITK. It is a clinically useful drug to treat B cell cancers. It inhibits CLL cell migration and survival <sup>2,3</sup> and downregulates expression of CD204. It enhanced antitumor immune responses in combination with anti PD-L1 blockade via its inhibition of ITK (IL2-inducible T-cell kinase). <sup>5</sup>
