Anwendungsbeschreibung	<p>Acalabrutinib (1420477-60-6) is a highly selective, potent (IC₅₀ = 3nM), and irreversible inhibitor of Brutons tyrosine kinase (BTK).¹ Improved target selectivity (especially against TEC family kinases and EGFR) decreased the number of serious side effects observed with Ibrutinib.² Acalabrutinib significantly inhibits BCR signaling, inhibits tumor proliferation, and reduces tumor burden.³ Clinically useful agent for treating B-cell cancers. BTK has also been shown to have a role in modulating the innate immune system, especially in dendritic cells and macrophages, suggesting a possible role in immunotherapy.⁴</p>
