Anwendungsbeschreibung	Larotrectinib is a potent (IC <sub>50</sub> s < 11 nM) inhibitor of tropomyosin receptor kinases A, B, and C (TrkA, B, and C). <sup>1</sup> It is >100 fold selective against a panel of 229 kinases. Larotrectinib markedly attenuated bone cancer pain and significantly blocked the formation of neuroma-like structures and the sprouting of sensory nerve fibers. Larotrectinib caused substantial tumor regression in various cancers displaying TRK gene fusions. <sup>2-4</sup> Larotrectinib is the first tissue agnostic drug approved by the FDA.
