Anwendungsbeschreibung	<p>FDI-6 selectively blocks FOXM1 binding to DNA (IC50 = 22.5 μM) in MCF-7 breast cancer cells and suppresses transcription of FOXM1 genes.¹ It decreased cell proliferation, migration, and invasion in MDA-MB-231 and HS578T triple negative breast cancer cell lines.² FDI-6 acted synergistically with olaparib to inhibit the growth of triple negative breast³ and pancreatic⁴ cancer cells. It was found to induce the mRNA expression of aryl hydrocarbon receptor genes with subsequent suppression of tumorsphere formation in MCF-7 cells.⁵ FDI-6 enhanced T cell activation, supported differentiation of CD8+ cells, and T cell-mediated killing of small cell lung cancer cells.⁶</p>
