Anwendungsbeschreibung	<p>Potent and selective inhibitor of N-acetyltransferase 10 (NAT10) which is capable of acetylating microtubules and histones.¹ Improves nuclear architecture, chromatin organization and fitness of both human lamin A/C-depleted cells and Hutchinson-Gilford progeria syndrome patient cells¹, normalizing progeric and aging cells². Enhances health span in a mouse model of human accelerated aging syndrome.³ Significantly reduces many of the defects associated with accumulation of the lamin A precursor, prelamin A.⁴ Inhibits NAT10-promoted metastasis which may be mediated by endothelial-to-mesenchymal transition in hepatocellular carcinoma.⁵</p>
