Anwendungsbeschreibung	<p>Vacuolin-1 (351986-85-1) inhibits autophagy via inhibition of Ca²⁺-dependent fusion of lysosomes with the plasma membrane and the release of lysosomal content and has no effect on other membrane-bound organelles.¹ It has been shown to block endosome maturation by activating RAB5 which compromises the biogenesis and function of lysosomes including autophagosomal-lysosomal fusion and endosomal-lysosomal degradation.² It potently inhibits migration, invasion and colony formation of cancer cells (which is linked to endosomal trafficking) and targets capping protein Zbeta (CapZbeta) in these processes.³ Inhibition of lysosomal maturation was shown to be due to potent inhibition of PIKfyve.⁴</p>
