Anwendungsbeschreibung	<p>Isothiocyanate constituents of cruciferous vegetables are potent chemopreventive agents for carcinogen-induced cancers in rodents.¹ PHITC was the most potent in a series of synthetic arylalkyl isothiocyanates at inhibition of tumorigenicity by NNK, a tobacco-derived nitrosamine, in a mouse model.² It was also found to induce apoptosis and inhibit leukemia cell growth in vivo³ and was shown to have dual function as a histone deacetylase inhibitor and hypomethylating agent⁴. PHITC was also shown to restore the activity of mutant p53 and reactivate the p53 pathway in human myeloid leukemia M2 cells.⁵</p>
