Anwendungsbeschreibung	MLS-544460 is an allosteric inhibitor of the Eya2 tyrosine phosphatase (IC50=4.1 uM) ¹⁻² which is ineffective against other tyrosine phosphatases including Eya3 and PTP1B. Treatment of patient-derived glioma stem cells induced loss of bipolar spindle formation along with G2/M cell cycle arrest. GSC proliferation was inhibited at concentrations 4 to 10-fold lower than normal brain cells. ³ Treatment of Axolotls following amputation impairs limb regeneration indicating a role for Eya2 in vertebrate regeneration. ⁴
