Anwendungsbeschreibung	CID16020046 is a selective GPR55 antagonist. ¹ In HEK293 cells expressing GPR55, the compound behaves as an antagonist on lysophosphatidylinositol (LPI)-mediated Ca ²⁺ release but was inactive on cells expressing CB1 and CB2. It blocks LPI-induced migration of colon cancer cells. ² It displays protective effects against oxidized LDL-induced inflammation ³ , mitigates advanced glycation end products-induced chondrocyte activation ⁴ , and displays anti-inflammatory effects in various cells ^{5,6} . A useful tool for studying the role of GPR55 in cellular physiology.
