| Produktbeschreibung      | nuclear factor kappa B subunit 1(NFKB1) Homo sapiens This gene encodes a 105 kD protein which can undergo cotranslational processing by the 26S proteasome to produce a 50 kD protein. The 105 kD protein is a Rel protein-specific transcription inhibito... |
| Klonalität               | Polyclonal                                                                                                                                                                                                                                                    |
