| Kategorie                | Biochemikalien                                                                                                                                                                                                                                                |
| Produktbeschreibung      | A cell-permeable aminothiazolo-carboxamide compound that is reported to augment SB431542 and PD0325901 in enhancing human iPSCs (induced Pluripotent Stem Cells) generation from fibroblast cultures virally transfected with 4-TF (Oct44, Klf4, Sox2, and... |
| Molekulargewicht         | 311.4                                                                                                                                                                                                                                                         |
| Reinheit                 | ~95% (HPLC)                                                                                                                                                                                                                                                   |
| Formulierung             | Supplied as a beige or tan powder.                                                                                                                                                                                                                            |
