| Applikation              | FLISA, RIA, WB                                                                                                                                                                                                                                                |
| Immunogen                | Human Factor XI                                                                                                                                                                                                                                               |
| Produktbeschreibung      | Human Factor XI is a plasma glycoprotein which circulates in a non-covalent complex with high molecular weight kininogen. The mature molecule is synthesized in the liver. It is a two-chain homodimer with a molecular weight of ~160kD. It is estimated ... |
| Klonalität               | Monoclonal                                                                                                                                                                                                                                                    |
| Klon-Bezeichnung         | [2B32]                                                                                                                                                                                                                                                        |
| Reinheit                 | Purified by ammonium sulfate precipitation, ion exchange chromatography and gel filtration from ascites.                                                                                                                                                      |
| Formulierung             | Supplied as a liquid in PBS, pH 7.2. No preservative added. No stabilizing proteins added. Labeled with Fluorescein isothiocyanate (FITC).                                                                                                                    |
