| Kategorie                | Molekularbiologie                                                                                                                                                                                                                                                        |
| Produktbeschreibung      | Aldehyde Dehydrogenases (ALDHs) are NAD(P) <sup>+</sup> -dependent enzymes that catalyze the oxidation of endogeneously produced and exogenous aldehydes to their corresponding acids (1). They are involved in the detoxification of alcohol-derived acetaldehyde an... |
