| Kategorie                | Molekularbiologie                                                                                                                                                                                                                                             |
| Produktbeschreibung      | Aldose reductase (AKR1B1) is a member of the aldo-keto reductase (AKR) superfamily and catalyzes the NADPH-dependent reduction of a wide variety of carbonyl-containing compounds to their corresponding alcohols. This protein is implicated in the devel... |
| Molekulargewicht         | 35.8                                                                                                                                                                                                                                                          |
| NCBI                     | <a href="#">001619</a>                                                                                                                                                                                                                                        |
| Reinheit                 | 95% (SDS-PAGE) Endotoxin: 1.0 EU/1ug of protein (LAL)                                                                                                                                                                                                         |
| Formulierung             | Supplied as a liquid in 20 mM Tris-HCl buffer, pH 8.0, containing 1mM DTT, 10% glycerol.                                                                                                                                                                      |
