| Produktbeschreibung      | Galanthus nivalis agglutinin (GNA) is a small molecular weight tetramer consisting of subunits of about 13,000D. This lectin contains little or no carbohydrate. Unlike most mannose-specific lectins, it is not a metalloprotein and does not require Ca+... |
| Molekulargewicht         | 263044                                                                                                                                                                                                                                                        |
| Reinheit                 | Highly purified. Three bands at 26kD, 30kD and 44kD detected by SDS-PAGE.                                                                                                                                                                                     |
| Formulierung             | Supplied as a liquid in PBS, pH 7.2-7.4. Labeled with Biotin.                                                                                                                                                                                                 |
