| Kategorie                | Molekularbiologie                                                                                                                                                                                                                                             |
| Produktbeschreibung      | Human Haptoglobin, produced from pooled human plasma, exists in three common phenotypes, Hp 1-1, Hp 2-1, Hp 2-2 with a molecular mass ranging from 8kD-200kD. It is a glycoprotein which is synthesized in the liver and circulating in the blood. Reduced... |
| Reinheit                 | 95% (SDS-PAGE): polymorphic form (mixture of 1-1, 2-1 and 2-2).                                                                                                                                                                                               |
| Formulierung             | White to off-white lyophilized powder. Reconstitute with sterile dH2O.                                                                                                                                                                                        |
| CAS Nummer               | [9087-69-8]                                                                                                                                                                                                                                                   |
