Anwendungsbeschreibung	<p>BLZ945 is a potent and brain-penetrant CSF-1R inhibitor (IC₅₀ = 1 nM).¹ It displayed significant antitumor effects in glioblastoma cells by altering the polarization of tumor-associated macrophages (TAMs). BLZ945 was shown to have significant antitumor effects in various cancer models via decreasing or reprogramming myeloid suppressor cells.^{2,3,4} It reversed the epithelial to mesenchymal transition in an inflammatory breast cancer model.⁵ BLZ945 modulated the tumor microenvironment in a lung cancer model by activating cross-talk between natural killer, T, and dendritic cells promoting antitumor immunity.⁶</p>
