Anwendungsbeschreibung

Application Notes: Applications: Treatment of 0.1µg of uracil containing DNA with 1U UDG for 10 min. at 37°C renders the DNA incapable of being copied by DNA polymerase. The enzyme can be 95% heat killed by incubation at 95°C for 10 minutes. Since UDG remains partially active following heat treatment at 95°C, it is recommended that uracil glycosylase inhibitor be added to prevent degradation of product DNA. Alternatively, reaction products can be immediately extracted with phenol/chloroform. Unit Definition: 1 unit is defined as the amount of enzyme that catalyzes the release of 60pmol of uracil/minute from double-stranded, uracil-containing DNA. Activity is measured by release of [3H]-uracil in a 50µl reaction containing 0.2µg DNA (104-105 cpm/µg) in 30 min. at 37C
