Anwendungsbeschreibung

Application Notes: This Human TYRO protein tyrosine kinase-binding protein (TYROBP) ELISA Kit employs a two-site sandwich ELISA to quantitate TYROBP in samples. An antibody specific for TYROBP has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyTYROBP present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TYROBP is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TYROBP bound in the initial step. The color development is stopped and the intensity of the color is measured
