Anwendungsbeschreibung

Application Notes: Human Tumor necrosis factor receptor superfamily member 17 (TNFRSF17) ELISA Kit employs a two-site sandwich ELISA to quantitate TNFRSF17 in samples. An antibody specific for TNFRSF17 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TNFRSF17 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human TNFRSF17 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of TNFRSF17 bound in the initial step. The color development is stopped and the intensity of the color is measured
