Anwendungsbeschreibung

Application Notes: Human Telomerase (TE) ELISA Kit employs a two-site sandwich ELISA to quantitate Telomerase in samples. An antibody specific for Human Telomerase Telomerase has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any Telomerase present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugated Telomerase detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of Telomerase bound in the initial step. The color development is stopped and the intensity of the color is measured
