Anwendungsbeschreibung

Application Notes: This Human Protein kinase C zeta type (PRKCZ) ELISA Kit employs a two-site sandwich ELISA to quantitate PRKCZ in samples. An antibody specific for PRKCZ has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PRKCZ present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for PRKCZ is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of PRKCZ bound in the initial step. The color development is stopped and the intensity of the color is measured
