Anwendungsbeschreibung	<p>Application Notes: This Human Palmdelphin (PALMD) ELISA Kit employs a two-site sandwich ELISA to quantitate PALMD in samples. An antibody specific for PALMD has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PALMD present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for PALMD is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of PALMD bound in the initial step. The color development is stopped and the intensity of the color is measured</p>
