Detektionsbereich	Please inquire
Sensitivitaet	Please inquire
Proben	Cell culture supernatantsSerumPlasmaOther biological fluids

Anwendungsbeschreibung

Application Notes: This Mouse Lamina-associated polypeptide 2, isoform alpha (TMPO) ELISA Kit employs a two-site sandwich ELISA to quantitate TMPO in samples. An antibody specific for TMPO has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TMPO present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TMPO is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TMPO bound in the initial step. The color development is stopped and the intensity of the color is measured
