Anwendungsbeschreibung

Application Notes: ELISA: Peptide ELISA: antibody detection limit dilution 1:4000. WB: Preliminary experiments gave bands at approx 150kDa and 17kDa in lysates of cell lines HeLa, HepG2 and K562 after 0.5 µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the bands we observe given the calculated size of 92.5kDa according to NP_115896.1. Both detected bands were successfully blocked by incubation with the immunizing peptide (and BLAST results with the immunizing peptide sequence did not identify any other proteins to explain the additional bands). We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates Have any further splice variants/modified forms been reported
