Anwendungsbeschreibung

Application Notes: standard: 2000 pg/mL. Test principle: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with EE protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to EE. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm 10nm. The concentration of EE in the samples is then determined by comparing the OD of the samples to the standard curve
