| Kategorie                | Antikörper                                                                                                                                                                                                                                                    |
| Applikation              | IF, IHC, WB                                                                                                                                                                                                                                                   |
| Spezies Reaktivität      | Human                                                                                                                                                                                                                                                         |
| Immunogen                | Peptide sequence around phosphorylation site of serine 167 (L-A-S(p)-T-N) derived from Human Estrogen Receptor- $\alpha$ .                                                                                                                                    |
| Produktbeschreibung      | Nuclear hormone receptor. The steroid hormones and their receptors are involved in the regulation of eukaryotic gene expression and affect cellular proliferation and differentiation in target tissues. Feinmesser RL,et al. (1999) J Biol Chem, 274(23):... |
| Klonalität               | Polyclonal                                                                                                                                                                                                                                                    |
