Anwendungsbeschreibung	ModDetect(TM) Phosphorothioate Clone PS04 has been validated for use in ELISA. In antigen-down or immunometric ELISAs, the ModDetect(TM) Phosphorothioate Clone PS04 preferentially detects phosphorothioate modified phosphate groups over native phosphodiester sugar-phosphate backbones. It is also likely to be functional in IF and IHC assays, however, its sensitivity, specificity, and conditions for optimal use in these assays has not yet been determined. All assays should be optimized by the user.
