Anwendungsbeschreibung	<p>Hsp 18.5 is a low abundance protein and estimated concentration of this protein in total cell extract is ca. 0.007-0.01%. Therefore to be able to visualize this protein the load per well needs to be at least 20 ug of heat shocked total protein/well. It is crucial to heat treat the plants at 38C for 3 hours at high humidity. Please, note that longer transfer time might result in losing a signal for this protein.</p>
