| Category                   | Proteine/Peptide                                                                                                                                                                                                                                              |
| Product Description        | SFRS1 is a member of the arginine/serine-rich splicing factor protein family, and functions in both constitutive and alternative pre-mRNA splicing. The protein binds to pre-mRNA transcripts and components of the spliceosome, and can either activate o... |

| UniProt                    | <a href="#">Q07955</a>                                                                                                                                                                                                                                        |
| Form                       | Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.                                                                                                                          |
| Target                     | The synthetic peptide sequence used to generate the antibody AP6857a was selected from the N-term region of human SFRS1. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.             |
