Application Notes	A cell permeable fungal toxin which binds to the barbed end of actin, inhibiting its polymerization. ¹ Inhibits cell division, migration and glucose transport. ² Causes cell cycle arrest at G2/M and induces apoptosis in HCT-116 colorectal carcinoma cells. ³ Cytochalasin B-induced membrane vesicles (CIMVs) retain cell surface receptors of the parent cells and retain fusion specificity with target cells. ⁴ CIMVs are a promising new vector system for drug and biomolecule delivery due to their natural origin and participation in intercellular communication. ⁵
