Application Notes	KY-226 is a selective allosteric protein tyrosine phosphatase 1B (PTP1B) inhibitor (IC50 = 250 nM) with no activity at PPARgamma.1 It significantly reduced plasma glucose, triglyceride, and A1c levels without weight gain in db/db mice. ² It has been suggested that KY-226's anti-diabetic effects occur via enhancements in insulin signaling and anti-obesity effects via leptin signaling enhancements. ² KY-226 has also been shown to protect neurons from cerebral ischemia. ³ This effect is mediated by restoration of tight junction proteins via activation of the Akt/FoxO1 pathway. ⁴
