Application Notes

NGI-1 is a cell-permeable inhibitor of oligosaccharyltransferase (OST) - IC<sub>50</sub> = 1.1  $\mu$ M.<sup>1</sup> It blocks cell-surface localization and signaling of the epidermal growth factor receptor (EGFR) glycoprotein and selectively arrests proliferation only in cells dependent on EGFR for survival. NGI-1 caused G1 arrest and senescence in RTK-dependent NSCLC cells (PC9, HCC827, H3255, H1581). NGI-1 displays antiviral behavior against various flaviviruses (Dengue, West Nile, Yellow fever and Zika).<sup>2</sup> It also was able to overcome resistance to EGFR tyrosine kinase inhibitors in mutant NSCLC cells<sup>3</sup> and enhance radiosensitivity and cytotoxic effects of chemotherapy in glioma cells with high levels of RTK activation.<sup>4</sup>
